Java Developer

PROFILE SUMMARY

Oracle Certified Java full-stack developer (OCJP) with 6+ years of experience in developing scalable web-based Java applications. Skilled in designing and implementing Microservices and Service-Oriented Architectures (SOA), with expertise in deploying scalable applications on AWS cloud and on-premises environments. Experienced in domains such as banking, IoT, Big Data solutions, and e-commerce.

- Proficient in the software development life cycle, including development, testing, deployment and maintenance
- Expert in designing and developing effective RESTful APIs using Java 8, J2EE, and Spring framework and extensive expertise in SQL and NoSQL databases, unit testing, troubleshooting and debugging
- Experience working in the front end development of modern Javascript frameworks like Angular, Node.js and traditional web applications using HTML, CSS and JavaScript
- Skilled in integrating DevOps practices into the software development life cycle with a keen focus on attention to detail, focused on Agile methodology
- Demonstrated creative problem solving, leadership and a collaborative approach with great accuracy, adaptability and efficiency in delivering successful project outcomes

TECHNICAL SKILLS

Programming Languages & Technologies: Java 8, TypeScript, JavaScript, Node.js, HTML5, CSS3

Frameworks & Libraries: Spring MVC, Spring Boot, Spring Cloud, Spring Data, Hibernate JPA, JDBC, Angular 9, jQuery, Bootstrap, Ngx-charts, D3.js

Web Services & APIs: RESTful APIs, Microservices
Monolithic Architecture, Swagger, Spring Security, JWT, OAuth 2.0

Databases: MySQL, Oracle, MongoDB

Version Control Systems: Git, GitHub, Bitbucket

IDE & Build Tools: IntelliJ IDEA, Eclipse, VS Code, STS, Maven, Gradle

DevOps & Tools: AWS -IAM, ELB, RDS, EC2, ECR, EKS, Elastic Beanstalk, S3, CloudWatch
JIRA, Docker, Kubernetes, Jenkins, SonarQube, Kafka, Splunk, Artifactory

Testing & QA: JUnit, Mockito, Selenium (BDD - Cucumber & TestNG)

WORK EXPERIENCE

Freelance Java Developer
Lodi LLC, Cincinnati, USA

June 2024 - Present

- Developed Java based RESTful APIs utilizing Spring Boot with Spring JPA integration and MySQL databases to ensure robust and scalable service architecture
- Built applications using Core Java 17 and Led the deployment of applications to AWS, employing services like Elastic Beanstalk

- Successfully migrated Firebase Cloud Messaging (FCM) APIs to the newer HTTP v1 APIs, ensuring enhanced reliability, and new feature availability, which improved the notification delivery system
- Monitored system performance and application logs using AWS CloudWatch, setting up custom metrics and alerts to proactively identify and resolve issues
- Built and executed complex join SQL queries using spring Data JPA and incorporated pagination when working with large data volumes and improved performance and user experience by 60%
- Implemented URL shortening using Twilio's advanced API features and created and managed DNS records, including TXT records to verify domain ownership and generated TLS certificate and private key using certbot to facilitate secure communication
- Applied asynchronous processing using CompletableFuture introduced by Java 8 which resulted in application performance by 70%

Java Full Stack Developer
Tata Consultancy Services, India

May 2021 - Mar 2023

- Developed and maintained microservice architecture for enterprise-level Java applications, focusing on high performance and reliability using core Java and Spring Boot Microservices in an Agile environment, Utilized Maven for build management to ensure smooth development cycles
- Integrated of legacy credit card systems into the existing microservices setup by maintaining consistency with the prior migrations and achieving 0% technical issue rate post-implementation
- Developed new features of application using Java 8 streams and lambda expressions and functional interfaces to process collections of data more efficiently and concisely, and used parallel streams for bulk operations to improve performance
- Secured applications with OAuth and JWT for user data protection, using token-based authentication for seamless data exchange, developed feign client APIs to enable synchronous calls between microservices, and used Spring Cloud Load Balancing on the client side to balance the workload and to reduce latency, lower infrastructure and maintenance costs
- Developed front-end using Angular 9, TypeScript, Node.js, HTML5, SCSS, CSS3, Bootstrap, and Angular Material, following W3C standards, developed custom directives and components enhancing modularity and reducing future development time by 20%
- Optimized navigation in Angular applications by implementing routing and lazy loading for better user experience and performance. Achieved around 20% faster performance and memory management by efficiently utilizing Angular services which avoided redundant API calls and optimized object creation
- Implemented Angular HttpClient with RxJS observables for efficient asynchronous data handling and API communication with RESTful APIs built with Spring Boot
- Deployed microservices on the AWS cloud using Docker, ECR, EKS, and optimized CI/CD pipelines with Jenkins and BitBucket, resulting in a 30% improvement in deployment frequency and reduced rollout times

Java Full Stack Developer
Amrita Center for Cybersecurity Systems and Networks, India

Jun 2017 - Apr 2021

- Developed Amrita Dynamic Dashboard, a home-grown Big Data visualization tool utilizing Java 8 and Spring Boot in a service-oriented architecture achieving a 35% increase in data processing and query efficiency through optimized back-end operations

- Used Hibernate to implement database access layers in Spring-based applications, optimizing CRUD operations and reducing boilerplate code through the use of HQL (Hibernate Query Language)
- Configured Spring Security for user authentication, with JDBC authentication to securely manage user credentials stored in relational databases and architected distributable and user-friendly dashboards featuring role-based access controls and simple import/export functionality between servers
- Integrated Apache Kafka as pub/sub model for robust, real-time data streaming capabilities, enhancing analytics performance by 25%, enabling faster and more reliable data-driven decision-making processes
- Designed MySQL databases to efficiently structure and query complex datasets using optimized joins, improving data retrieval performance. Additionally, optimized MongoDB for ingesting and managing high-volume, timestamped data streams from various external sources, enabling scalable storage and advanced analytical processing
- Developed interactive dashboards in front-end using Angular 9, TypeScript, Node.js to track IoT devices such as water tanks and GPS trackers and integrated ngx-charts for live data visualization of sensor readings, designed and implemented Angular components, directives, and services, integrating the D3.js library to create workflows with advanced data visualization capabilities
- Optimized the application's charting library by incorporating new D3.js charts and converting legacy Highcharts minimized data loading issues by 15%, and fixed numerous bugs and production issues related to various Highcharts, ngx-charts, D3 charts which enhanced application performance and user satisfaction by 40%

Junior Full Stack Developer

Aug 2016 - Jun 2017

Mindbare IT Solutions LLP, India

- Developed over 15 dynamic, database driven websites using PHP, HTML, CSS, Bootstrap, JavaScript and jQuery.
- Improved website performance and user retention by implementing responsive designs and innovative navigation templates, leading to a 18% increase in user satisfaction
- Utilized jQuery UI and other libraries to streamline complex animations, UI interactions, and DOM manipulations, providing a smooth, user-friendly experience
- Integrated AJAX requests with JavaScript and jQuery to facilitate seamless, asynchronous communication with the backend, improving application performance
- Handled the incoming AJAX request in the backend using PHP, processed the data, and returned a response back to the front-end without needing to refresh the page
- Ensured code quality and stability by managing the codebase in Git, worked on several critical bugs which enhanced user experience and reduced error rates by 30%
- Implemented strategies for search engine optimization in websites as well as hosted websites in Godaddy and managed.

EDUCATION

Bachelor of Technology - Calicut University - Computer Science & Engineering

May 2016

CERTIFICATIONS

Oracle Certified Associate Java SE 8 Programmer (OCAJP)

Dec 2021

UiPath Certified - Robotic Process Automation Developer

Mar 2019
